Endocrine & diabetes experience:

SHO experience:

I had experience as registrar in ward duties & endocrine & diabetic clinic .

During this period I gained valuable experience in the management of severe DKA , adrenal crisis , thyroid storm , cases newly discovered diabetes mellitus ,cases with prolonged neonatal jaundice , neonate with ambiguous genitalia , pick up cases with precocious puberty , turner syndromes,

Registrar level experience:

During the first two years I had as a registrar at endocrine & diabetes department at Tripoli Medical Center which is a busy tertiary paediatric endocrine & diabetes center , during which I shared the duties with the rest of the registrar team. This post gave me the opportunity to consolidate and improve my clinical experience in various aspects of endocrinology & diabetology . I have become competent in management of diabetic & endocrine cases . I also gained experience in performing ultrasound of the thyroid gland and abdominal ultrasound .

In 2002 I have become specialist in this a busy tertiary level diabetic & endocrine centre. I am enjoying the training at this unit as a great chance to build up my experience specially managing children & adolescent with diabetes type 1 also type 2 , as well as endocrine cases including thyroid diseases which includes(congenital or acquired hypothyroidism , hyperthyroidism , thyroid hormone resistant syndrome , graves disease , as well as thyroid tumour , adrenal gland disorders such as (congenital adrenal hyperplasia , adrenal insufficiency , adreno-leukodystrophy , allgrove syndrome and adrenal tumour) adreno-genital syndrome , testicular feminisation syndrome primary gonadal failure or secondary gonadal failure , , short stature , growth hormone deficiency , panhypopituitarism abnormal puberty delayed or precocious , simple obesity , or related to syndromes like prader willie syndrome or laron's moon face syndrome ,down syndrome , metabolic syndrome , pseudohypoparathyroidism , true hypoparathyroidism , causing disease and syndromes , skeletal dysplasia , osteogenesis imperfecta ,

we picked up a rare syndrome such as klippel traunany weber syndrome ,klippel fill syndrome , nonane syndrome , turner syndrome , disgorge syndrome, russel silver syndrome ,laron syndrome corenella de lange syndrome , Mc cune Albright syndrome , murac syndrome , neurofibromatosis syndrome , tubers sclerosis , sturge weber syndrome , brain tumour or cases secondary to radiotherapy or surgery applied for them , cases with chronic renal failure , I also joined my consultant during speaking to the parents either to counsel them or to break the bad news specially discussing about chronic long life disease .

. I am a member of the team involves two Professors and two consultants and two specialist is a referral centre for the diabetic and endocrine cases from different areas of north, western, southern , and middle parts of Libya . During this period I was responsible on receiving the new referrals, arranging for admission if needs, information collection, and growth assessment under supervision of the consultants as well as investigations and MRI if needed . I also was able to participate in running average of two to three clinics a week under supervision of my paediatric endocrinology & diabetology consultant Including growth assessment and detailed in tanner staging assessment, clinical assessment characters of some disease or syndromes . I also attended and presented in the regular weekly discuss the endocrine cases findings with Prof S. A busrewil and try to link them with the clinical findings and discuss the expected outcome.

During this period also I was responsible in writing medical reports which then get assessed and counter signed by the endocrinology & diabetology professors .

In 2008 , I have been started to teach medical students in 5th year about general paediatric , then in October 2010 i have been become one of the member teaching staff in Tripoli University , Faculty Of Medicine , paediatric

.

General Paediatric Experience:

SHO experience:

I worked as a paediatric SHO at General Paediatrics. During that period I became familiar with general Paediatric ward work. I covered Paediatric ambulatory unit and A&E in a busy area. I improved my skills in resuscitating and treating acutely ill children. I also gained experience in prioritising a busy workload and had the opportunity to be a member of a multidisciplinary team that practices evidence based medicine.

Registrar experience:

I continued my work as registrar for further 7 years in general Paediatric (cross cover with neonate) during this period I have gained experience in managing acutely ill children, Child protection cases recognition and management, communication skills...etc.

I have also participated in running different general and neonatal joined out patients' clinics under supervision of consultants.

I have gained higher level of general and sub specialty Paediatric experience.

Tripoli Medical Centre paediatric department is one of busy regional hospitals with variety of cases. It also runs service tertiary hospitals. This includes, Children with: Diabetes, endocrine , asthma , Cystic fibrosis, GORD , congenital emphysema, Oncology & haematology cases , immunodeficient cases paediatric nephrology , paediatric gastroenterology besides the general paediatric cases either in acute situations , admitted in the wards, or as out patient.

Also Paediatrics Endocrine & Diabetes clinic gave me the opportunity to have insight into different behavioral conditions, e.g.: ADHD, Autism , Sleep disorders related to obstructive sleep apnea , different types of depression .

Oncology Unit:

I have done one year in Paediatric Oncology/ Haematology department. During which I was widely exposed to different oncology / Haematology cases. I have also performed different invasive diagnostic and therapeutic procedures such as: bone marrow aspiration, bone trephine biopsy and administration of Intra-theal chemotherapy.
